Summary

Technical co-founder and versatile engineer with 4+ years of experience architecting and delivering scalable, cloud-native platforms across EdTech, logistics, and DeFi. Currently CTO of Webyalaya (Humitra Pvt Ltd), shaping the technical vision for a peer-to-peer learning platform built on three pillars — Human, AI, and Blockchain. Expert in full-stack development (React, Next.js, Node.js), blockchain (Solidity, Foundry), and AI-driven automation (LangChain, LangGraph). Proven track record of architecting robust infrastructures on AWS and Azure, leading engineering teams, and deploying AI-powered agents to accelerate development lifecycles. IIT Kanpur alumnus passionate about creating solutions that enhance accessibility, transparency, and collaboration.

Education

- **IIT Kanpur**
B.Tech, Mechanical Engineering (initially enrolled in Dual Degree program) 2016–Dec 2020

Technical Skills

- **Languages:** JavaScript, Python, Java, C++
- **Frontend:** React, Next.js, TailwindCSS, ShadCN, Framer
- **Backend:** Node.js, FastAPI, Django, Spring Boot, Flask
- **Cloud Infra:** AWS, GCP, Azure, Vercel, Firebase, Render
- **Databases:** PostgreSQL, MongoDB, DynamoDB, Neo4j, Pinecone
- **DevOps:** Git, Github, Azure Repos, Docker, Kubernetes
- **CI-CD:** Github actions, Jenkins, Azure Pipelines, AWS Lambda
- **Project Management:** Jira, Azure Boards, Notion, Asana
- **GenAI:** LangGraph, N8N, Context Engineering, LangChain, Prompt Engineering
- **Blockchain:** Solidity, Foundry, Hardhat, web3.js, ethers
- **AI Tools:** Claude code, Cursor IDE, ChatGPT

Experience

Humitra Pvt Ltd (Webyalaya.com) 2025 – Present
Co-founder & CTO

- Co-founded and lead engineering for Webyalaya, a peer-to-peer learning platform incubated at IIM Lucknow, built on three core pillars — **Human** (community-driven teaching and learning), **AI** (adaptive, device-aware learning enhancements across laptop, mobile, and tablet), and **Blockchain** (decentralized governance so users, not a few gatekeepers, shape platform rules).
- Set the technical vision and architected the full production stack: Next.js on Vercel, AWS ECS with Fargate and Docker for containerized services, Azure PostgreSQL Flexible Server for persistence, Azure VMs with LiveKit for real-time video learning, AWS S3 and Lightsail for media and auxiliary workloads, with Cloudflare as the DNS/CDN edge and GitHub Actions for CI/CD.
- Built and lead a cross-functional engineering team — running hiring campaigns (DevOps internship drives across LinkedIn, Instagram, JotForm), structured intern orientation (Canva-based stack onboarding decks emphasizing deep comprehension over speed), and agile delivery via Azure DevOps (epics, features, user stories, story points).

- Established the professional infrastructure backbone — Microsoft 365 email via Azure startup credits and Startup India recognition, Amazon SES production access for transactional mail, and a multi-cloud cost-optimization strategy balancing AWS and Azure footprints.
- Drove the product's AI and decentralization roadmap, evaluating how conversational agents, RAG-based discovery, and on-chain governance primitives can increase learner engagement and trust on the platform.

TalentSavvy Software Private Limited

May 2025 – Sep 2025

Software Engineer - Intern

- Developed and maintained full-stack JavaScript applications for SDLC analytics, enabling real-time lifecycle tracking and cross-team reporting.
- Architected and automated complex ETL workflows in Python to ensure efficient data processing and migration, improving pipeline reliability and throughput.
- Designed and deployed an AI-driven CI/CD agent leveraging LangGraph, automating build, test, and deployment workflows to accelerate delivery cycles.
- Led prompt and context engineering efforts to optimize AI agent performance, enhancing code generation accuracy and reducing errors.
- Utilized Claude code and Cursor IDE to streamline automated code generation and debugging, boosting developer productivity and integration quality.

Short-term Contracts & Startup Projects

Aug 2022 – Apr 2025

Senior Full Stack & Web3 Developer

- **PureFoodsDelhi.com** — Architected and deployed a serverless, event-driven logistics platform on AWS serving 50+ food brands and managing 500+ products. Automated end-to-end operations including SKU management, inventory tracking, agent dashboards, and marketing campaigns, eliminating manual processes.
- **ASBDesign.in** — Engineered a gamified, mobile-first design-education platform featuring AI-driven adaptive curriculum and competitive leaderboards, engaging 5,000+ learners. Implemented a multilingual job search system using Retrieval Augmented Generation (RAG) with conversational chat interface, driving a 30% increase in job application submissions and achieving a 70% course completion rate.
- **CoinsLive.org** — Developed a comprehensive blockchain education dApp with NFT-based certification system, growing to 3,000+ registered users with 450+ active community members. Subsequently rebuilt it as React-based community platform, boosting engagement metrics by 250% and content consumption by 85%.
- **Vedic Meet** — Architected a high-performance video streaming pipeline using AWS Lambda, FFmpeg, and S3, reducing latency by 45% and cutting operating costs by 30%. Rebuilt the iOS app from scratch with React Native, achieving a 50% faster load times.
- **LesGo** — Designed and implemented a Django-based social campaign management system for a decentralized loyalty platform, supporting capped promotions and real-time engagement analytics. Enabled significant uplift in promotional redemptions and tracked a lot of user interactions monthly.
- **EiLearn** (ETHGlobal Hackathon, Team of 4) — Co-developed an AI-powered Web3 trading education platform within a 48-hour sprint, featuring decentralized testnet trading game mechanics, AI-driven trading advisors, and on-chain smart contract validation. Integrated EigenLayer AVS for multi-signature fraud detection and blockchain oracles for real-time market data.
- **DungeonVerse** (ShapeCraft Hackathon Finalist, Team of 2) — Architected a decentralized dungeon-crawler builder on the Shape network, enabling users to design, share, and explore custom dungeons. Implemented an intuitive builder UI, cross-platform web and mobile gameplay, and an on-chain asset directory. Secured a Top-3 finish.
- Competed in 15+ global Web3 hackathons (ETHGlobal, ShapeCraft, Aptos, NEAR, Sonic, Hathora), developing 20+ proof-of-concept blockchain solutions under 48-hour sprints and se-

curing Top 5 finishes in 6 events.

Contata Solutions

Aug 2021 – Aug 2022

System Analyst

- Designed and implemented the backend architecture for a Spring Boot-powered carpooling app with MongoDB, Neo4j, and PostgreSQL, matching 10,000+ riders by location, timing, and preferences and reducing average wait time by 25%.
- Spearheaded development of a civic issue reporting platform using Angular, Spring Boot, and PostgreSQL, enabling citizens to file and track 5,000+ municipal requests monthly with real-time map-based status updates and automated workflow routing.
- Engineered and maintained CI/CD pipelines with GitLab CI and Docker, cutting release cycle times by 60% and ensuring zero-downtime deployments for critical services.

Selected Courses & Training

- **Knowledge Graphs for RAG** (DeepLearning.AI)
 - **Getting Started with Google Kubernetes Engine** (Google Cloud, Coursera)
 - **Google UX Design & Project Management Professional Certificates** (Coursera)
 - **An Introduction to Artificial Intelligence** (NPTEL, Prof. Mausam)
 - **Deep Learning Specialization** (Coursera, Andrew Ng)
 - **Blockchain & Cryptocurrency Program** (IIT Madras CCE & Pixeltests)
 - **Advanced Foundry for Solidity** (Cyfrin Updraft)
 - **Master Microservices with Spring Boot & Spring Cloud** (Udemy)
-
